PROPER PLANTING AND CARE OF FRUIT TREES

PRUNING FOR PLANTING: Most nursery fruit trees have a number of lateral branches radiating from the trunk between 24 and 48 inches above the bud union. Select a point just above three or four symmetrically placed laterals and lop off the balance of the top with sharp hand shears. Then shorten in the selected laterals to 3 or 4 buds, or "eyes". Trim off all other lateral growth. The root system should be examined for loose ends of broken roots. These may be present, carefully remove them above the breaks.

Some varieties, such as cherries, do not have lateral growth development as young nursery trees. Select three or four healthy looking buds 24-48 inches above the bud union and lop off the trunk above these. Later in the spring you will be able to select the three or four laterals wanted for future development and dispose of all others. **BE SURE TO KEEP THE ROOTS OF YOUR TREES ENTIRELY UNDISTURBED FROM DRYING OUT. THIS IS IMPORTANT.**

PLANTING: Dig large, spacious holes at least half again the size of the root system. While shoveling out, keep the top soil in a separate pile from the subsoil and check all sides. Hold the bud union at surface level while pushing in the topsoil first about one foot; following with the subsoil almost to surface level. Apply a slow stream of water into the newly filled-in soil to settle it firmly about the roots. The water does a far more efficient job than tamping with heavy soles. **DON'T OVERTHROW THE PRUNING OF REAL MICE WHEN PLANTING YOUR FRUIT TREES.**

IRRIGATION: Provide a basin around the base of your fruit trees large enough to accommodate 25 or 30 gallons of water. Make regular investigations with a hoe through the dry ground to determine the condition of the subsurface soil, and when it appears dry, irrigate. A mulch of peat moss or straw in the irrigation basin will prevent cracking of heavy soil and conserve moisture in all soils. After your young trees have become established you can use a mulch of straw and steer manure.

FERTILIZATION: Do not use commercial fertilizer until three months after planting, then use a balanced commercial fertilizer. **ALL FERTILIZERS SHOULD BE APPLIED TO THE SURFACE, NOT IN DIRECT CONTACT WITH THE ROOTS.** About a pound of balanced commercial fertilizer can be worked into the soil in the irrigating basin and washed to the root area by succeeding irrigations. Stop this as a three pound dose for a mature tree, following the root growth outward from the base of the tree with ever-widening circles of application.

CULTIVATION is required for prevention of volunteer seedling growth and to provide some protection for the near application of water or rainfall. Heavy soils are inclined to crack upon drying out and need thorough and frequent cultivation. Do not cultivate so deeply that surface film is removed or exposed and be careful not to "mark" the trunks of young trees.

PRUNING: During the first summer try to keep the new growth confined to the development of three or four well-spaced main branches. Trim off all unnecessary growth. When the leaves have dropped in late fall, cut back the main branches one third to one-half. Exception: Cherry trees should not be cut back; remove conflicting branches only.

BLENNHEIM-Above medium size; Fruit round-oblong, skin clear orange-yellow with bright red blush, tender and free. Flesh clear orange-yellow, juicy and sweet, vigorous bearer. Late June.

E. NEWCASTLE-Fruit medium size and round; skin lemon-yellow, flesh deep yellow, red cheeks, juicy and sweet. Early June.

MOORPARK-large highly colored; rich, luscious flavor; brownish red; quite firm. A favorite home canning variety. Late June.

ROYAL-Large well flowered attractive fruit. The flesh is delicious and deep orange in color. One of our best varieties and a favorite for home planting. June.

TILTON-Very large, light orange heart shaped fruit, flesh firm and parts readily from the stone. A heavy bearer, fine grained. July.

F R E E S T O N E P E A C H E S

BARCOCK-A medium sized white-fleshed freestone with a high blush. A favorite and early white-fleshed freestone with pleasing flavor. Juicy. Late June.

EARLY ELBERTA-A very good early type Elberta. Large, elongated, yellow freestone. Skin golden yellow flesh red; a good all ear and peach. Two weeks earlier than Elberta. Late June.

ELBERTA-large, usually elongated; skin a deep yellow, flushed with red where exposed to sun; very firm and sweet. Miller's leading peach for all purposes. Late July and early August.

LAY ELBERTA-Since it is the Elberta type. Large fruit is yellow with a heavy red blush on the cheek. More firm and sweeter than the ordinary Elberta. Well bit. Fruit firm sweeter than Elberta. Ripens a few days later than Elberta. First home canning variety. Late July. Early August.

GOLDEN BLUSH-Highly flavored fruit ripens at the same season as Elberta, which it resembles. It is a good late season collection in Southern California than Elberta. Mid July.

GOLDEN JUBILEE-large yellow freestone with red tinge. Flesh yellow, juicy. of good eating quality. Fruit round and local use. June.

HALE HAVEN-A new early yellow elongated of large size. Color good; flesh firm; a good shipper. Early July.

IMP. BARCOCK-Medium to large, white with red cheek. Early July.

INDIAN BLOOD-Large, round, yellow fruit; deep red at stone. Rather tart until fully ripe. Good for shipping and home use. August.

J.H. HALE-Popular large round peach. Fruit very beautiful. Flesh firm, yellow and of fine flavor. August.

MILLER'S LATE-The latest ripening fruit we have, and a good peach for the home orchard in warmer sections. Fruit is medium to large, of good quality and a heavy bearer. September.

NECTAR-An excellent, medium early, white fleshed freestone. Of large size. Its beautiful coloring and distinctive aroma make it a favorite home orchard variety. Firm, juicy flesh and fine textured. Ripening in Late June-July.

RIO GIG GEM-Large, red flushed yellow freestone, delicious firm yellow flesh, red at tip. Ripening about two weeks after J.W. Hale. Early Aug.

SAUCER-This medium white-skinned, white-fleshed peach gets its name from its peculiar flat shape; exceedingly sweet, juicy, and delicious. It is not affected by mild winter climates and ripens a large crop always. For this reason it is one of the best early maturing peaches for warm climates. June.

STRAWBERRY TREE-A handy early white peach. Creamy white skin, partly covered with a dark red. White flesh with a tendency to be tinged red at the pit; tender and juicy. Splendid table peach for home orchard plantings. Early July.

BONITA-Fruit is medium to large in size. Skin color is bluish yellow with a deep red blush; flesh is yellow with fingers of pink extending into it. Flavor sweet. For areas where frost; less chilling than latecock. August.

VENTURA-The fruit is slightly flattened and is almost without a pointed tip. Attractive in appearance, but is rather in color. The skin is yellow with a red blush. Flesh is yellow. For growing it is especially in Ventura County. Mid-July.

ORANGE COUNTY PEACHES

HEATH-Medium to large; creamy white with a light red blush. Flesh white. Juicy and delicious. A fair variety for home canning. Late July-early Aug.

INDIAN BLOOD-Medium sized; greenish yellow, spotted; small for Aug. August.

ORANGE-Large fruit of uniform size. Clear golden color, tinged red. deep golden flesh, very firm, with delicious flavor. One of the best canning variety. Early August.

SIMB-Large, uniform sized fruit. Clear yellow skin. Flesh sweet and deep yellow to the pit. Early season. A fair variety with a chance. Mid-Aug.

STRAWBERRY-A large sized, white fleshed cling of exquisite flavor. Skin creamy-white marbled with deep red. One of the favorites for canning white cling-tones. September.

ORANGE COUNTY PEACHES

GOLD MINE-Large attractive fruit, delicious flavor. White flesh with some red at the pit, which is produced from the skin. Best varieties for home canning and eating fresh. July.

GOWER-Medium round with deep red skin; flesh creamy white; reddish pink at pit. Fine freestone for early market. Early July.

JOHN RIVERS-Medium to large size, crimson colored on outside cheek. Flesh greenish white. A good quality semi-freestone. Mid-July.

STANWICK-Medium, pale green with deep red cheeks; a delicious flavored freestone; flesh white and juicy. Good for drying, canning. Mid-August.

BEAUTY-Large to medium, bright red, yell w flushed tinged with red. One of the better early varieties. tree is str. eg. vigorous grower. Good shipper. Early June. Self fertile.

BLUE DAMSON-Medium, roundish cal: dark purple freestone, fruit tart, a good plum for canners and preserves. September.

BERBANK-Medium large; yell w, mottled red; flesh y-llw; small pit.
Very productive. July.

El Dorado-Medium, large, flat, thin, smooth, more red (almost black) than of good keeping quality. Flesh firm, green or yellow when ripe, sweet, somewhat dry. Very vigorous grower. Late July.

GREEN GAGE-Medium; round, val. lobes equally; skin straw yellow with light bl. m., faintly speckled. Flesh golden yellow, juicy, tender and sweet. Tree very productive, excellent for home use. August.

1441. 1441a. 1441b. It has large size, firm flesh and excellent qualities. The fruit is greenish yellow, juicy, and has a pleasing tart flavor. The tree is an early bloomer and very productive. Lat. August.

1. 2. 3. 4. 5.

EARLY ITALIAN-Medium - large; oval and tapered to the end. Blue
color. September.

STANTARD-Fruit large, dark purple; flesh arbor. fine grained, juicy and sweet; a free stone, ripening in Aug. at.

SUGAR-larger, early, dark purple bunch of medium quality. Flesh sweet and a good variety for shipping or drying. August. Self fertile.

A. I. W. N. D.

DRAKE-A good commercial nut variety. It bears uniform crop from year to year and adapts itself to all soil conditions. Medium size, almost round, with a regular thin shell, green and well filled with a good kernel. A pollinator for all varieties.

IXL-This variety brings the highest yield of fruit, marketed in the shell because of its clean attractive, easy shelled and crisp kernels. The nut is a good shell, of fine size, green and thin, and upright grower, and a bearer.

KORONA-It is noted for its small size and its early bearing. Very early bearer. It is a heavy yielding variety. Plant with No. 1 for pollination.

SE FLOR ULTRA-It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit.

NEW PARISI-King of the world. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit.

TERAP PR LITE-It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit.

Black and White Varieties

BLACK MICH-It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit.

BROWN BERRY-It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit.

IMP. PR WY PR LITE-It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit.

KAT II-It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit.

NEW PR LITE-It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit.

W. GEMMA-Huge white fig, excellent for planting near the coast; also bears well inland. Fruit is pear-shaped with a waxy white skin and sweet amber flesh. A good variety.

THOMPSON-The famous 'Big' fig. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit. It is a good variety. It is a regular and heavy bearer of fruit.

BEVERLY HILLS-Jewel pear. Large round bellid. Medium size with red and yellow stripes. August.

GRAVESTONE-The fruit is large and round. Beautifully striped with red. Crisp, juicy, and well flavored. Grows well in the valley. A good spring and winter apple. July and August.

JANAHAB-A favorite variety. Bright and clear variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. October.

RED DELICIOUS-A favorite variety. Fruit large, round, large, crisp and juicy. Skin red with white dots. Flavor excellent. November.

RAINBOW-The fruit is large and round. Bright and clear variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. November.

W. BELLID-A favorite variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. November.

Y. BELLID-A favorite variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. November.

Y. BELLID-A favorite variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. November.

Y. BELLID-A favorite variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. November.

Y. BELLID-A favorite variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. November.

Y. BELLID-A favorite variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. November.

Y. BELLID-A favorite variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. November.

P. P. P. I. F.

PARISH-The fruit is large and round. Bright and clear variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. November.

BURR DIAMOND-A favorite variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. November.

W. BELLID-A favorite variety. Fruit medium size, roundish and slightly flattened. Skin yellow with white dots. Flesh a delicate pinkish white with a hint of red. Flavor excellent. November.

W. S. 1111-1 large pear, ripening earliest in group, cell r and flav r, but ripening very late. The tree is very productive and the fruit keeps remarkably well. This is the only pear which does so well in the Imperial Valley and still ripening in winter.

C O N T E N T S

[illegible]

TAH'PAK-A very large fruit. It is three or five inches in diameter weighing over a pound and is fully covered in a coarse, slightly warty and sticky skin, across edges. The fruit is red in color. Flesh is tender, juicy and very sweet; very few seeds. It is very good and it because of the excellent quality and hands of appearance of the fruit. Ripens late.

ASSOCIATES-Prints is small, but well known, and is a vigorous, not over-50-year.

EURYKA-Popular northern California variety. Large, shelling nuts of fine appearance. Shells are rather thick, well sealed; kernel light cream colored. Holds up well in shelling. Plants large upright tree. Fine commercial variety and a good producer of seed trees.

FARTLEY-Large, slightly inferior nut of high quality. The tree comes into bearing very early and is taller than most in habit of growth. Tree is a little slow in fruiting habit.

PAYNE-Its early bearing and heavy production make it a popular variety. The nut is shelling rather well but the shell is of medium thickness, kernel full. Produces a good number of seed trees and is subject to some cankers. Because of early bearing and heavy production it is slower in growth than other varieties.

THOMAS BLAKE WALNUT-Series of trees all of good character.

EARLY BEARING AND PRODUCTION

EARLY PINK-Early blooming; the fruit is pink.

LATE PINK-Beautiful pink fruit; the fruit is a few years later.

EARLY RED-Beautiful red fruit; the fruit is a few years later.

LATE RED-Red fruit; the fruit is a few years later.

PARTY WHITE-Large, white fruit; the fruit is a few years later.

LATE WHITE-Beautiful white fruit; the fruit is a few years later.

VARIETAL-Producing a variety of fruit; the fruit is a few years later.

HELEN PARKER-Large, white fruit; the fruit is a few years later.

EARLY BEARING AND PRODUCTION

DAILY BLOSSOM 3-11-3-Tree with 11 to 12 petals. Fruit, large yellow, the fruit is a few years later.

DAILY BLOSSOM 4-CLARE-Tree with 12 to 13 petals. Fruit, highly colored, the fruit is a few years later.

EARLY BEARING AND PRODUCTION

PRUNUS PULCHRA-Tree with 11 to 12 petals. Fruit, white. Flowers large, the fruit is a few years later.

PRUNUS PULCHRA-Tree with 11 to 12 petals. Fruit, white. Flowers large, the fruit is a few years later.

PRUNUS PULCHRA-Tree with 11 to 12 petals. Fruit, white. Flowers large, the fruit is a few years later.

PRUNUS VESUVIUS-Tree with 11 to 12 petals. Fruit, white. Flowers large, the fruit is a few years later.

PRUNUS FLORIBUNDA-Tree with 11 to 12 petals. Fruit, white. Flowers large, the fruit is a few years later.

EARLY BEARING AND PRODUCTION

ALMA WHITE-Abundant flowered white, plus color in fragrance.

212-213. - *LA. CHINESE*-Has a hard green, gl. cov., compact head of foliage. Fruit only in the winter quantities. Fruits deep reddish-orange. Fruit is not so mild in flavor. December to March.

214-215. - *LA. CHINESE*-Finest and largest of all kinds. Seedless. Juicy fruit. Fruit is only during the winter when it is in demand. Large winter and all in winter.

216-217. - *LA. CHINESE*-The best of all the oranges. Fruit of medium size and shape. Fruit is juicy. When fully ripe the skin is blood-red, the flesh is lighter and the seeds are white. The fruit is not so mild in flavor. December and the fruit is found to eat at all times. February to May.

218-219. - The fruit is very large and is all over thick and usually has a very low spreading habit; a heavy bearer. Fruits continuously.

220-221. - *LA. CHINESE*-The most popular of the Mandarin oranges. The tree is a medium size and a heavy bearer. The fruit is medium to large in size, round, orange-red color and flattened in shape. It is very juicy and has a high flavor. February to May.

222-223. - The fruit is very large and is all over thick and usually has a very low spreading habit; a heavy bearer. Fruits continuously. The fruit is of medium size, clear, round and of the highest quality. The fruit is very juicy and has a high flavor. February to May.

224-225. - This variety between Satsuma and King Mandarin is the most popular of all. Its beautiful rich orange color, its size and shape, its exceptional flavor and juicy, and its high flavor. It is a very large fruit, round, flattened in shape. It is very juicy and has a high flavor. February to April.

226-227. - This variety is the most popular of all. It is a very large fruit, round, flattened in shape. It is very juicy and has a high flavor. February to April.

228-229. - This variety is the most popular of all. It is a very large fruit, round, flattened in shape. It is very juicy and has a high flavor. February to April.

230-231. - This variety is the most popular of all. It is a very large fruit, round, flattened in shape. It is very juicy and has a high flavor. February to April.

PAJDEROSA LEMON-A navel fruit for home planting, the fruit attaining enormous size, often 12 inches in circumference. The tree is dwarf, quite hardy, and the fruit is of good quality. Usually bears first year after planting and ripens continuously throughout the year.

PINK GRAPEFRUIT-Identical to March Seedling except flesh is pink or red. May to August.

RANGPUR LIME-This is one of the hardiest of the limes, and bears extremely heavy crops of small fruit of a beautiful deep orange color. Fruit is extremely acid and a little juice takes a lot of acid. Nov-March.

ROBERTSON NAVAL-Bred for an enormous crop of delicious navel oranges. It is a fine winter orange for home planting. Bears younger and earlier than Washington Naval.

SAMPSON TANGEL-This is the best known of the Tangels, and its golden-yellow, glossy skinned fruit, are filled with a delicious orange-red juice which contains in a well blended way the zestful tang of the grapefruit and the sprightliness of the Tangerine. Next to the Kara Mandarin we consider this to have the most delicious juice of all citrus fruits. February to May.

SATSUMA PANGURINE-This hardiest orange tree we grow, and for this reason can be planted where other citrus fruits will not succeed. It is also the earliest bearing variety, not coming into full bearing until Christmas, and its big, flat, heart-shaped deep orange fruit, are sweet, tender and juicy. The tree is a semi-dwarf, bearing when 2 feet high, bearing while very young. November to April.

SWEET LIME-The fruit of this variety has the characteristic lime flavor, but the juice is so sweet that it can be taken with or without sugar. Large, yellow, very juicy fruits which look like a hard-boiled lemon. A large, handsome tree which bears a crop of large fruit, and is considerably hardier than either Eureka or Valencia. You will find this fruit excellent to eat any time of the year and that the juice makes a most refreshing and unusual drink. December to May.

VALENCIA-The best summer orange the world ever saw is the Valencia. As the navel season closes in the latter part of the year, the Valencia begins to ripen and are available through the summer and fall months. The medium-sized fruit is juicy and sweet, with few seeds, and the tree is the largest of all citrus varieties. Most of the summer orange juice consumed in the United States comes from the Valencia. April to October.

WASHINGTON NAVAL-This famous seedling winter ripening orange is largely responsible for California's world wide citrus fame. The fruit is large, with the characteristic navel at one end of each end, and in flavor, juiciness and general appearance is hard to equalled by any other orange. The skin peels off readily, while the segments are easily separated without breaking. While readily grown anywhere in Southern California, it is at its best in the foothills and valleys a few miles removed from the coast. December to April.

GRAPE VINES

EASTERN CONCORD-Round solid blue black berries of medium size, spherical with blue bloom, clusters medium to large, broadly tapering, single shouldered, skin thick and tough. Fine for juice and jelly. August.

BLACK MONTEKA-A black seedless grape of medium size; elongated, tender skin; excellent crisp sweet flavor. August to September.

CARDINAL-The cardinal is an early dark grape ripening three weeks before Thompson Seedless and four weeks before Red Malaga. Berries about as large as Ribier in diameter, spherical, grayish bloom. Clusters are medium to large, conical in shape and not heavily shouldered. The fruit is firm and holds up well in shipping. An excellent table grape with slight Muscat flavor. Late July.

LADY FINGER-Ripens mid-season. Very large, long cylindrical shaped white grape. It has very brittle stems. This is an improved lady finger type grape. Thriftier grower. August.

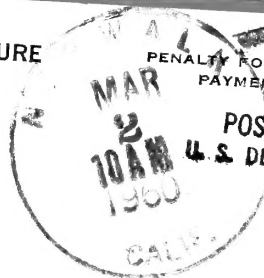

MUSCAT-Clusters medium sized; shouldered loose and conical, berries large, obovoid, dull green, seeded with moderately tough skin, home use, wine and raisins. September.

TOKAY-One of California's most popular shipping grapes. Large oblong berries borne in immense bunches. Pale red skin covered with lilac bloom; flesh is firm, juicy and crackling, with good vinous flavor. Heavy producer. September.

THOMPSON SEEDLESS-California's best known table and raisin grape. Oval, greenish yellow berries contain no seed. Produced in exceptionally heavy bunches. Good arbor grape. August to September.
